# Sales Data Report Message SLSRPT

## Version: EDIFACT D97A

# SLSRPT

## Sales data report message

### Message Status=1

A message to enable the conveyance of product activity related to the sale of products or services, such as the activity location, date, time or period, quantity, pricing, monetary amount, market sector, involved parties and other data enabling various sales analysis processes. Such activity information allows the recipient to perform statistical and quantitative analysis in support of production, planning, marketing, replenishment, and other processes.

## Clarification:

| | |
|---|---|
| 1/0010 | A service segment starting and uniquely identifying a message. The message type code for the Sales data report message is SLSRPT. Note: Sales data report messages conforming to this document must contain the following data in segment UNH, composite S009: Data element 0065 SLSRPT   0052 D   0054 97A   0051 UN |
| 1/0020 | A segment by which the sender must uniquely identify the sales data report by means of its type and number. |
| 1/0030 | A segment specifying general dates and, when relevant, times related to the whole message. The sales report preparation date and the sales period covered by the report must be specified using this segment. |
| 1/0040 | A group of segments identifying the parties with associated information. |
| 1/0050 | A segment identifying names and addresses of the parties, in coded or clear form, and their functions relevant to the sales data report. Identification of the sender of the report and the recipient is mandatory for the sales data report message. It is recommended that where possible only the coded form of the party ID should be specified e.g. the sender and receiver of the report are known to each other, thus only the coded ID is required, but when a new address might have to be clearly specified, this should be done preferably in structured format. |
| 2/0150 | A group of segments providing activity, e.g. sales, data by line item within a specific location. This segment group is mutually exclusive with segment group 9. If segment group 9 is not used, there shall be at least on occurrence of segment group 5. |
| 2/0160 | A segment to identify the activity, e.g. sales, the quantity of the activity, and other data related to the specific activity such as buying party, selling price, date sold, etc. |
| 2/0210 | A group of segments to identify the product or service and the activity, e.g. sales, which applies to the product or service. In addition other data related to the activity may be specified. |
| 2/0220 | A segment identifying the line item by the line number and configuration level. In addition it may identify the product or service to which the activity, e.g sales is applicable. |
| 2/0320 | A group of segments to identify the activity, e.g. sales, the quantity of the activity, and other data related to the specific activity such as buying party, selling price, date sold, etc. |
| 2/0330 | A segment identifying the quantity and activity, e.g. quantity sold. |
| 2/0350 | To specify the name and address of a party related to the specific activity quantity identified in the previous QTY segment, e.g. the party the product(s) were sold to. |
| 2/0360 | A segment specifying the price type and amount associated with the activity quantity. |
| 2/0370 | A segment identifying the date/time or period during which the activity quantity occurred if different than the date/time or period specified in either the header section or segment group 5. |
| 2/0380 | A segment to specify reference numbers associated with the activity quantity. |
| 2/0390 | A group of segments providing activity data, e.g. sales, by location within a specific line item. This segment group is mutually exclusive with segment group 5. If segment group 5 is not used, there shall be at least one occurrence of segment group 9. |
| 2/0570 | A service segment ending a message, giving the total number of segments in the message and the control reference number of the message. |
